

Retrospective document scanning and authentication

GBG IDscan offers document scanning and authentication solutions that can be deployed during the real-time onboarding of customers, or applied retrospectively to existing customer documents in a simple 9-step batch process.

01

We agree up front with you how the results of the batch will be presented back, including any extracted data.

03

You work with one of our professional services consultants to review your batch.

05

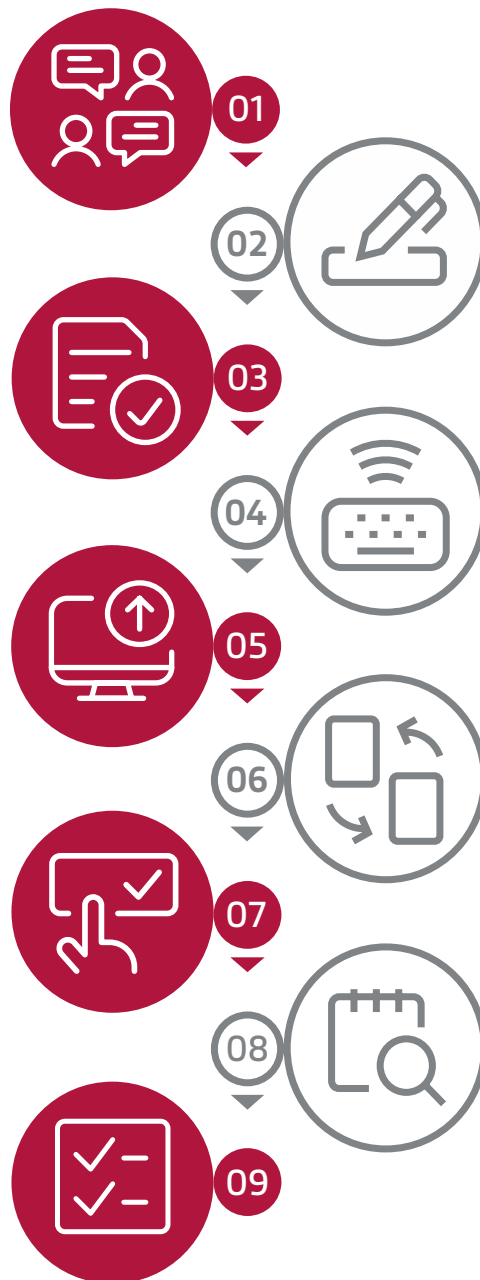

You securely upload your documents.

07

Optionally, any suspicious documents are referred to our Forensic Document Examiners.

09

We present the results back to you and can provide extracted details in a data file.

02

You sign our Batch terms and conditions and data sharing agreement – so we are all confident.

04

Our professional services consultant sends you the information on how to access our SFTP service.

06

We run your batch of documents through our systems, and check for image quality.

08

We check your batch of documents for any potentially tampered documents.
